ADG Solutions Bringing Lorandi Silos and Other Equipment to U.S. Plastics-Recycling Market

ADG Solutions, Tucker, GA, and Lorandi Silos (S.R.L.), Brescia, Italy, have concluded an agreement under which ADG Solutions (ADGS) will become the exclusive distributor for silos, weigh systems and related material handling systems in the United States.

ADG Solutions serves recyclers of post-consumer and post-industrial plastic waste, providing a wide range of equipment as well as process expertise that can help them maximize efficiency for highest yield at lowest cost.

Lorandi Silos has been working with stainless steel since 1952, first for wine tanks, then containers and machinery for the food and the chemical industries, and more recently silos for bulk powders, pellets and flake. As the name suggests, the company is well known for its bulk-material storage silos, but their product line includes smaller-capacity bins and containers, mixing silos, air-separation systems, weighing systems as well as pneumatic and mechanical conveying systems.

"Bringing the Lorandi product line to the United States allows ADGS to offer recyclers some really exceptional technology," says Sandy Guthrie, President of ADG Solutions. "All of their equipment is well-designed and well-built, but I'm particularly excited about their mixing silos, separation technology and weigh systems. These products will be installed in our facility near Atlanta and will be available for testing and evaluation this fall. These are terrific additions to our equipment portfolio."

Available in capacities from 350 to 30,000 L (12.4 to 1060 cu ft), the Lorandi mixing silos combine temporary storage for pellets and regrind with vertical auger mixing. New material enters the silo at the bottom and immediately lifted through resin and deposited on top. Load cells under the base of the silos are connected to an electronic control system that can weigh material as it enters or leaves the container, allowing for accurate proportioning and or batching into shipping containers.

Equipment is stocked and serviced in Atlanta.

(More)

From scrap to pellet, ADG Solutions helps companies process hard-to-recycle plastic waste from industrial, commercial and post-consumer sources. In business for over 10 years, the company engineers custom systems including washing, size-reduction, densifying, extrusion, filtration, pelletizing and material-handling equipment.

—Ends—

Mixing silos like this one are among the new Lorandi products now being offered in the U.S. by ADG Solutions.
