

ADG offers new options for Fimic screen changers

July 5, 2012

PLASTICS NEWS REPORT

ADG Solutions of Fairfield, Conn., is offering new alternatives for the Fimic self-cleaning, continuous screen changer for contaminated scrap.

ADG now offers filter screens with a size of only 200 microns (about 80 mesh), and expects to have a 150-micron (100 mesh) screen available later this year, President Sandy Guthrie said.

Another new option: Model SCF-700 screen changer, which extends the Fimic system to recycling operations running throughput rates from 6,000 to 10,000 pounds an hour.

ADG is the exclusive North American importer of screen changers from Italy-based Fimic Officine Meccaniche SAS.
